

PROVIDERS

CareSpan offers Providers a digital health platform that supports the delivery of high quality healthcare at the lowest cost.

Critical Diagnostic Data at the Click of a Button

A treatment is only as good as the diagnosis upon which it is based. CareSpan feeds you diagnostic data—both archived and in real-time—from hi-definition images of body parts, vital signs monitors, and a myriad of sensors and devices, as well as DICOM images of X-rays, CT scans, MRI and ultrasound, to stethoscope sounds and ECG tracings. *All are available to you at the click of a CareSpan Clinic button during each live audio-visual online clinical encounter with your patients.*

Don't Be a Slave to Your Electronic Medical Record

The CareSpan Clinic integrated health record serves as an interactive tool to enhance any clinical encounter. Follow that wound with serially archived pictures. Demonstrate the resolving pneumonia with sequential improvements in breath sounds saved to the record. Capture a rhythm strip to show resolution of the atrial fibrillation from last visit. The examples are inexhaustible. Complete the charting of each clinical encounter in real time, using voice recognition to capture your notes, findings and treatment plan. *With CareSpan, your record entries are complete as your clinical encounter finishes.*

Patient as Partner

Your patients are sourcing their own digital information about their bodies and conditions. The era of patient as partner is here. Take advantage with the CareSpan Clinic.

- Share information, images, sounds, and tracings
- Teach your patients interactively
- Demonstrate the pathology
- Push educational materials to patients
- Enlist patient support in the care you recommend

The CareSpan Clinic makes all this interactivity possible.

Built for the 21st Century

We have built the CareSpan Clinic for the digital future as well as the analog-to-digital-to-analog real world changes in health care that we are experiencing. Not only is CareSpan HIPAA compliant and observing of Federation of State Medical Boards and AMA guidelines and standards for the delivery of care using medical information and communications technologies, *CareSpan embeds patient informed consent of all types into its online clinical infrastructure*. Telemedicine Informed Consent, Data Informed Consent, Jurisdictional Informed Consent, Treatment Informed Consent, Product Informed Consent and Clinical Research Informed Consent—all are present when needed in the CareSpan Clinic.

Your Practice, Your Choice

As you practice medicine, you must schedule and control your day, you must be able to prescribe medications, obtain consultations from other specialists, and refer appropriately. The CareSpan Clinic integrates all these features and many more.

- Serve patients faster, better and more cost effectively than ever before
- Serve new patients regardless of where they may reside
- Reach the needy and underserved as well as the patient next door
- Practice anywhere you happen to be—at home, in the office or on the road—and with minimal overhead
- Thoroughly enjoy the practice of medicine once again.

Embark on the practice of digital medicine.
